

# Simple is the New Standard

PosiFrac HALO™ Frac Seat

PosiFrac Toe Sleeve™

## Two Revolutionary Designs: Industry Standard Redefined.

TAM developed the PosiFrac Toe Sleeve™ and the PosiFrac HALO™ large bore frac seat to eliminate the need for coiled tubing in a plug-and-perf completion.

The PosiFrac Toe Sleeve™ is designed to open on bleed down after the high-pressure casing test. Multiple sleeves can be installed at the toe of the well and can be opened simultaneously, providing more than one fracture initiation point.

The PosiFrac HALO™ large bore frac seat has the largest ID of any frac plug on the market, and it does not require mill-out following plug-and-perf completion operations. The simple design increases reliability and virtually eliminates the risk of pre-setting while being pumped to setting depth. Using industry standard wireline setting tools, the PosiFrac HALO™ is setting a new standard for plug-and-perf completions.
