

# Zonal Isolation

## It's the difference between success and getting stung.

Zonal Isolation is critical to the success of your well. And TAM's VO-rated HATCH Packer set an industry standard as the first integral stage cementing assembly qualified to ISO 14998 VO Annex A and Annex D, and ISO 14310. The 9-5/8 in. VO HATCH Packer uses the same sealing system as the VO MTM Port Collar, qualified gas-tight at 300°F (149°C), to ensure that casing integrity is not compromised—whatever the application.
