

## CASE HISTORY

Well Intervention: Water Shut-Off

SlikPak™ Plus – Slickline/E-line Inflatable Packer

### Location:

### Northern Iraq

### Challenge:

Shut-off water producing perforations.

### Solution:

Run Bridge Plug thru-tubing on e-line to isolate lower water producing perforations.

### Well Description:

Oil producer with 4-1/2" production tubing and 7" production liner

### Tools Used:

2.90" OD Retrievable Bridge Plug SlikPak™ Plus with 3" OD fluid reservoirs\*

### Procedure:

- Run Bridge Plug through 4-1/2" tubing to setting depth and correlate.
- Inflate Bridge Plug inside 7" liner and disconnect.
- Tag Bridge Plug to confirm setting.

### Results:

- Bridge Plug set successfully.

### Value Created:

- Water production stopped completely and return to 100% oil production.
- Eliminated costs of processing water production.
- Improved well economics.
