

# Need Bridge Plug/Squeeze Packer For Your Large Diameter Casings ?

Single-Set Inflatable Packer

## Robust Design. Flexibility, Built In.

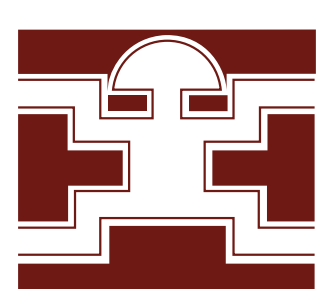

Ideal for Large Diameter Casing Applications.

The TAM Single-Set Inflatable Packer can be utilised for a variety of applications during the well construction phase. This premium, high strength packer is specifically designed for large diameter casing and open hole applications. It is extremely flexible and can be configured as a squeeze packer, a permanent or retrievable bridge plug, or a cement retainer. The main benefits of the packer are as follows:

- Ability to run through wellhead/BOP restrictions.
- No weight required to set the packer at shallow depths.
- No slip damage when applying pressure due to the large surface area.
- Can be set in both cased or open hole.
- Ability to provide 100% gas-tight seal.

The Single-Set Inflatable Packer can be supplied for casing strings from 9-5/8in. through to 30in. conductor and open hole sizes from 8-1/2in. through to 28in. The main applications for the Single-Set Packer are:

- Cement squeeze.
- Temporary suspension/abandonment.
- Storm plug.
- Plug and abandonment (set in casing or open hole after casing section milling).
- Base for cement plug.
- Open hole plug-back.
- Whipstock packer for open or cased hole.
