Inflatable and Swellable Packers

FOR IMMEDIATE RELEASE

TAM International Unveils Custom Cement Integrity System Developed for Major Operator
22-inch LongCAP® completes design validation & product testing

HOUSTON— Dec. 9, 2014 – TAM International, an independent oilfield services company providing inflatable and swellable packers to the oil and gas industry, unveiled its new 22-inch Casing Annulus Packer, or LongCAP®, developed for a major international oil company. The new LongCAP follows TAM's recent design and qualification of a 22-inch Port Collar. Together, the LongCAP and Port Collar offer operators improved cement integrity to meet higher well safety standards. TAM designed the 22-inch system for an international operator's offshore project as the company continues to provide tailored solutions to its oil and gas customers.

"The development of this new 22-inch system continues TAM's tradition of providing fit-for-purpose, custom solutions for our clients' needs," Ray Frisby, VP of Technology, said. "The new 22-inch system further strengthens TAM's position as the leader in Cement Integrity products, offering the most complete range of products in the industry."

The 22-inch LongCAP is ISO 14310 V6 qualified. The rigorous testing program involved multiple cycles of differential pressure reversals both from above and below the LongCAP packer set inside a 33-inch test fixture. The LongCAP element met or exceeded all test requirements.

TAM International continues to be an industry leader and innovator, providing the global community with first-class technical support, products, and services from its offices worldwide. The company's product offering also includes multi-set and single-set inflatable service packers, unconventional completion systems, industry-leading swellable packers and many other advanced, innovative solutions for the oil and gas industry.
